PROFESSIONAL EXPERIENCE

DEKRA **June 2025 – Present**
Cybersecurity Product Analyst

- Conduct cybersecurity assessments of connected products, combining technical testing, security requirements evaluation and technical reporting.
    - Perform Bluetooth and Wi-Fi security testing and reproduce known Android vulnerabilities using public proof-of-concept exploits.
    - Evaluate medical-device cybersecurity requirements against **IEC 60601-4-5** and contribute to vulnerability assessment methodologies and technical documentation.
- **VulnZoo**, an IoT Cybersecurity Training & Research Lab:
    - **Presented at Black Hat USA 2026 Arsenal**, demonstrating a vulnerable IoT ecosystem for hands-on security research and training.
    - Designed and developed an IoT security platform featuring automotive, industrial, medical and other laboratories for practical vulnerability assessment and security training.
    - Integrated vulnerable embedded devices, web APIs and Android applications using **Raspberry Pi, OpenWrt, Python/Flask/Django, MongoDB, SQLite and Docker**.
    - Developed reproducible security scenarios covering **OWASP IoT Top 10, OWASP API Security Top 10 and OWASP Mobile Top 10 risks**.
    - Contribute to training on the EU Cyber Resilience Act (CRA).

ADDITIONAL PROJECTS

Inode-based File System Design (FUSE) **Academic project**
Lead Developer **2024**

- Designed and implemented a custom inode-based file system.
- Integrated FUSE framework to enable user-space file system operations.

Netathon: Corporate Network Design **Hackathon**
Network Engineer Student **2024**

- Designed and deployed a secure corporate network using Cisco networking infrastructure, applying network segmentation and security principles.

EDUCATION

University of Málaga (UMA) **Málaga, SP**

- Computer Engineering 2020 - Present
- Bachelor's Thesis (in progress): Linux ransomware detection using Logical Block Addressing (LBA) access patterns.
- Relevant coursework: Computer architecture, assembly programming, processor design, Java object-oriented programming and control systems. High honors in Computer Control.

42 Málaga —Fundación Telefónica
Programming Curriculum **2023-2025**

- Project-based training in C, C++, Bash, software development and systems programming.

TECHNICAL SKILLS

Programming: C, C++, Python, Bash, Java, SQL, JavaScript.
Tools/Technologies: Burp Suite, Nmap, Metasploit, Wireshark, Docker, Git.
Language: Spanish (native) and English B2 (Cambridge English) and currently learning German A2.
Others: Driving license (Category B) and own vehicle.
